SKILLS

Languages	Python, SQL (BigQuery, PostgreSQL)
AI & ML	LLM Pipelines, Prompt Engineering, AI Voice Agents, scikit-learn, Claude, Gemini, Llama 3, Qwen
Data	Pandas, NumPy, Data Cleaning, Feature Engineering, Exploratory Data Analysis (EDA)
Analytics	Product Analytics, Cohort Analysis, Funnel Analysis, Drop-off Analysis
Visualization	Streamlit, Plotly, Metabase, Matplotlib, Seaborn, Excel
Platforms	Google Cloud Platform (GCP), GitHub, Bitbucket, Confluence, Jira

EXPERIENCE

MoneyView | Applied AI Research Intern

Sep 2025 – Present

- Built **PRIMA**, a full-stack AI research automation pipeline that replaced manual coding of open-ended survey responses with automated classification, thematic summarization, and Excel-ready outputs; reduced turnaround from **13 hours to 1 Hour** while reaching **90% classification accuracy** across **20k+ rows** and **10+ projects**.
- Productized PRIMA into a reusable research platform by adding **cohort analysis**, **BigQuery-backed reporting**, **OAuth**, and **Cloud Run** deployment support; built a **template library** with **20 reusable code frames** across **6 product categories**.
- Refactored PRIMA into modular components - **PrimaCodus**, **PrimaNet**, and **Primalytics** - to separate coding, netting, and analytics workflows; improved model routing and batch design to reduce token consumption by **84%**.
- Built a **CSAT analytics dashboard** for **633K+ support tickets** and **50K ratings** across **6 demographic cohorts**; surfaced the primary friction driver and supported leadership's decision to expand regional support capacity.
- Designed MoneyView's **First AI voice research workflow** - designed prompt + PCA parameters, Dashboards for 3 bots across 1/3/5-day inactivity cohorts, built a **transcript processing pipeline** to recover responses missed by PCA, reducing dataset creation from **25 min to 20 seconds** and improving bot setup efficiency by **67%**.
- Led end-to-end consumer insights analysis across **5+ studies** for Personal Loans and cross-sell products, translating raw responses into decision-ready findings for product managers and directors.

PROJECTS

FastPred — Automated EDA & Prediction Tool

[GitHub](#) | [Live App](#)

- Built a **Streamlit web application** that automates exploratory data analysis and model training for tabular datasets, enabling rapid prototyping for datasets with up to 100 features and 10k+ rows.
- Implemented automated feature engineering, model comparison (regression/classification), and hyperparameter tuning workflows, reducing time-to-insight for quick analysis tasks from hours to minutes.
- Deployed as a public tool with reproducible preprocessing pipelines and interactive visualizations for non-technical stakeholders.

EDUCATION

B-Tech CSE-Data Science : 1st class (82%), JNTU Hyderabad

2021 - 2025

Google Data Analytics Specialization

Dec 2023

<https://www.coursera.org/account/accomplishments/specialization/FXRQWES2UB8Q>

ACTIVITIES

Led hackathon and academic project teams, mentored **10 Data & ML learners**, supported **7,000+ community members** through technical guidance, and contributed data-driven insights to a **published book** (credited in preface).
